## INTRODUCTION

The commercial fishery in the Ontario waters of Lake Huron is managed by the Ontario Ministry of Natural Resources (OMNR), Upper Great Lakes Management Unit in cooperation with native and non native commercial fishermen throughout the lake. In order to assist in describing and managing this fishery, this report of commercial fishing activity is produced annually which not only summarizes the commercial fishing activity the over past year, but also provides a short historical record of commercial data.

Commercial fishing activity on Lake Huron uses harvest quotas. In place since 1984, this method allocates a maximum harvest for all quota managed species to all licensed and controlled fisheries within a specified quota management area (QMA) (Figure 1). The sum for all fishers is the total quota for a particular species in a QMA. Not all fish species in Lake Huron are quota managed, but when caught commercially, they are included in this report with no associated quota value.

This report contains Lake Huron commercial summaries for the whole lake, for each of the three basins, and for individual QMAs. It also contains commercial fishing statistics (harvest, effort, targeted CPUE, quota, % quota taken) for the major fish species in each of the QMAs for the period 1989 to 2006. In locations where more than one fishing gear was employed, results are given for each type of gear used.

Licensed commercial fishermen in Lake Huron are required to report effort, catch and harvest information using Daily Catch Report (DCR) forms. In addition, commercial fisheries operating under fishing agreements are required to report similar information to the OMNR on an annual basis. These data provide the basis for the summaries found in this report and are used in further stock assessment analyses.

In recent years, the Upper Great Lakes Management Unit has attempted to audit and update historical commercial fish information as much as possible, as well as develop a process for summarizing the information for publication. Consequently, the data are updated as required and the summaries in this report are regenerated on an annual basis. This means that any changes made to data after publication may result in differences between this report and past reports. This report should be considered the most up to date and correct when compared to previously published reports.

Every attempt has been made by all parties to ensure the data presented in this report are complete. For 2006, all known commercial fishing information was available at the time of printing. If more information for 2006 comes to light after printing, it will be included in future reports.

Figure 1. Lake Huron quota management areas. The main basin is comprised of QMAs 4-1 to 4-7. Georgian Bay is comprised of QMAs 5-1 to 5-9. The North Channel is comprised of QMAs 6-1 and 6-3.

## DISCUSSION

The commercial fishery in 2006 was comprised of 37 licensed commercial fisheries and 8 Aboriginal commercial fishing agreements. The number of fisheries in Lake Huron has declined in recent years. The majority of the fisheries continued to be gill net fisheries with 2 trap net fisheries, one in southern Lake Huron and the other in the northern main basin, off the south western shore of Manitoulin Island.

In 2006, the commercial harvest in Lake Huron continued to be dominated by lake whitefish (Table 1), the percent of quota taken in each QMA ranged from 0% to 109% throughout the lake. Lake wide lake whitefish harvest increased almost 13% from 2005. In general lake whitefish harvest has been lower in recent years relative to previously. A number of issues other than fish abundance have been implicated including market demand, increasing operational costs, incidental catches of non-target species, bad weather, and environmental conditions.

Lake trout were the second highest component of the total harvest followed by yellow perch and walleye. Lake trout catch declined somewhat in 2006, both in total amount and in relation to lake whitefish catch. Walleye and yellow perch harvests both increased markedly from 2005. Chub catch continued to be very low throughout the lake. Lake herring and round whitefish continued to contribute to the overall harvest in Lake Huron.

Updated quotas were in place for lake trout in all parts of the lake in 2006. No QMA's had lake trout allowances in 2006.

## GLOSSARY OF TERMS

**Catch** - the total weight of all fish captured in commercial fishing gear. This includes harvested fish as well as any fish that are reported released alive or discarded. The term "targeted catch" refers to catch data that are specific to fishing effort directed at a single species. Catch is derived from commercial fishers' catch reports and where necessary, from records of fish purchases by wholesalers.

**CPUE** - Catch Per Unit of Effort. For most species CPUE equals targeted catch divided by targeted effort for that species using a single gear type (gill net or trap net). For lake trout, effort used included all targeted lake whitefish effort plus any lake trout targeted effort.

**Effort** - the amount of fishing gear deployed while targeting a specific species, expressed in kilometres of net for gill nets and number of net lifts for trap nets.

**Harvest** - the total weight of all fish that are landed, sold, or taken home and subsequently reconciled with the commercial quota. Harvest is derived from commercial fishermen's catch reports and where necessary from records of fish purchases by wholesalers.

**Percent Quota Taken** - the harvest expressed as a percentage of the quota.

**Quota** - the total allowable commercial harvest for a species within a quota management area in a given year. This is the sum of quota specified on issued commercial fishing licenses, allowed harvests under commercial fishing agreements, and any Crown held quota considered available to be harvested in a given year. Lake trout and lake whitefish quotas may include temporary allowances in addition to quota in some years. This is sometimes referred to as issued quota.

**Value** - the estimated dollar value of fish sold at the first point of sale (wholesale value). Value is derived from fish price information provided by the Ontario Commercial Fisheries Association (OCFA) and the harvest data.

## LAKE HURON

Table 1. Catch, harvest, and quota data for all commercially caught fish species for all three basins of Lake Huron, 2006.

Species	Catch (kg)	Harvest (kg)	Quota (kg)	% Quota Taken	Value (\$)
Channel Catfish	6,582	1,357	63,728	2.1	1,055

## LAKE TROUT

Figure 6-3.3. Lake trout quota (line) and harvest (bars) from management area 6-3.

Figure 6-3.4. Lake trout gill net CPUE (kg/km) for management area 6-3.

Table 6-3.3. Lake trout harvest, CPUE and quota data from gill nets in quota management area 6-3, 1989 to 2006. Effort used to calculate CPUE was lake whitefish targeted effort that incidentally caught lake trout.

Year	Harvest (kg)	CPUE (kg/km)	Quota (kg)	% Quota Taken
1989	942	1287.7	394	239.0
1990	551	33.8	774	71.1
1991	361	70.4	888	40.6
1992	517	78.5	888	58.2
1993	88	60.1	888	9.9
1994	259	13.3	888	29.1
1995	19	2.4	1032	1.8
1996	428	19.9	904	47.3
1997	0	--	772	0.0
1998	0	--	772	0.0
1999	0	--	772	0.0
2000	0	--	772	0.0
2001	2757	--	772	357.1
2002	12306	--	772	1594.0
2003	16092	--	772	2084.4
2004	4495	92.3	903	497.7
2005	207	37.7	903	22.9
